

Bay Property Management Group

https://www.baymgmtgroup.com/ | WordPress (Elementor, Flatsome, WP Rocket, Yoast) on Cloudflare APO | Crawled 9 October 2026

2,120 URLs crawled, all HTTP 200	33 Mobile performance (home)	100 Lighthouse SEO, all pages	81% E-E-A-T checks (56 of 69)	5 High-priority fixes
--	--	---	---	---------------------------------

Executive summary

Bay Property Management Group has a strong SEO foundation. Every one of the 2,120 sitemap URLs returns 200, Lighthouse SEO scores 100 on every template tested, posts carry Article and author schema, 288 URLs have FAQ schema, and the median blog post is over 2,000 words. Tag archives and staging copies are correctly kept out of the index.

The main losses are **mobile speed**, **index hygiene** and a few **sitewide template bugs**. On mobile the hero image is lazy-loaded by WP Rocket, so the largest element appears after 14 to 19 seconds in lab tests, and three separate Google tag libraries plus reCAPTCHA block the main thread. The footer phone button on every page links to a broken web address instead of a phone number. The sitemap lists 14 redirected URLs and 42 noindex job posts, and several duplicate or leftover pages (including a theme demo post) are indexable.

The five high-priority fixes are configuration and template changes, not content rewrites, and can be done in a day or two by whoever manages the WordPress build.

What is working

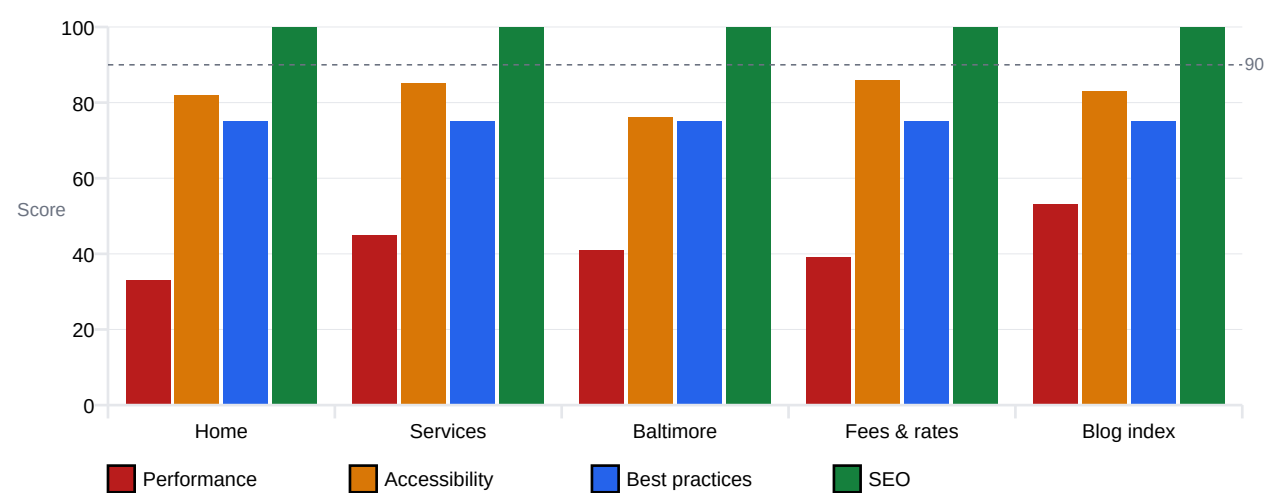

- All 2,120 sitemap URLs return 200; Cloudflare APO serves the HTML in 30 to 50 ms.
- Lighthouse SEO is 100 on every tested page; desktop performance on the homepage is 96.
- Every page has a title, og:image and large Twitter card. Posts carry Article + Person schema, 288 URLs have FAQ schema, and the 7 office hubs have LocalBusiness with reviews.
- Deep content: median post length is 2,097 words; 552 posts were updated in 2026.
- Tag archives and staging copies are correctly noindexed. Every sitemap URL is linked internally (no orphans).

Prioritised action plan

Priority	Area	Issue	Scope	Fix
High	Performance	Hero image loads last on mobile	LCP 15.1 s home, 19.3 s Baltimore, 14.4 s Fees & rates (lab, mobile).	The LCP element is the Elementor hero container. Its background image is deferred by WP Rocket's <i>LazyLoad for CSS background images</i> . Exclude the hero container from that feature (or use an with fetchpriority=high) and preload the hero image.
High	Performance	Too much third-party JavaScript	Total Blocking Time 0.65 to 1.76 s. About 530 KB from three Google tag libraries.	GTM-5X3QGKN, gtag G-5EXEYHEDLL and gtag AW-809934358 load separately. Fire GA4 and Ads from GTM only. Load reCAPTCHA (356 KB) and Formidable (150 KB) only where forms exist or on interaction. Delay the Facebook pixel.
High	Links	Footer phone button is broken on every page	All 2,120 pages.	href is http://(443)%20708-4698. Change to tel:+14437084698 and drop target=_blank / nofollow.
High	Indexing	Sitemap lists URLs that should not be there	14 redirecting URLs and 42 noindex career URLs.	Remove redirected pages from the sitemap (Cumberland, Lancaster and York County pages and contact pages, baltimore-city-md, 3 resource pages). Exclude careers from the Yoast sitemap or make job pages indexable.
High	Indexing	Indexable duplicate and leftover pages	8+ URLs (see appendix).	Delete or 301 the theme demo post <i>velkommen-til-bloggen-min</i> ('Just another post with A Gallery') and the Temple University '-duplicate' page. Merge duplicate post pairs. Noindex the two '-ga' ad landing pages and /unsubscribe/.
Medium	Links	4 broken internal links	11 linking pages.	/washington-dc-staging/ (6 office pages), /property-management-in-baltimore/mt-vernon/ (3), two blog links (1 each).
Medium	Links	Internal links through redirects	62 targets; /contact linked from 2,087 pages.	Link menu and footer straight to /contact/. Update links to /property-management-company-in-harrisburg/ (14 pages, redirects home) and the old Towson, Owings Mills, Parkville and Silver Spring URLs.
Medium	Trust	Every external link is nofollow	Sitewide, including texasbmg.com, social profiles, NMLS.	Remove nofollow from the sister site, social profiles and regulator links. Keep it for paid or untrusted links only.
Medium	Trust	No Terms of Service page or public email	Footer and legal.	Publish Terms of Service (also needed for SMS form consent) and show a contact email in the footer.
Medium	Content	Copy reads at college level	Median grade 13 (pages), 13.6 (posts); Flesch about 37.	Shorter sentences and plainer words on service and city pages. Target grade 8 to 10.
Medium	Content	Thin county resource pages	15 pages with 117 to 170 words.	Expand with local landlord rules, licensing and fees, or merge into one hub. Fix /locations/maryland/ (68 words, no H1).
Medium	Accessibility	Zoom disabled and other failures	Lighthouse accessibility 76 to 86.	Remove user-scalable=no / maximum-scale from the viewport. Fix contrast, unlabeled links and form fields, iframe titles and heading order.
Low	Content	Title and meta description gaps	977 titles over 60 characters; 50 categories without meta.	Shorten long post titles or drop the brand suffix. Write meta descriptions for blog categories.
Low	Content	Heading structure	12 posts with 2 H1s; 5 pages with none.	One H1 per page. Add H1 to /blog/, /privacy-policy/, /sitemap/, /locations/maryland/.
Low	Accessibility	Author avatar images without alt	6,113 images on 1,912 pages.	Add alt text (author name) to the post template's author-box avatar.

Priority	Area	Issue	Scope	Fix
Low	Content	Repetitive 'property management' wording	71 of 172 sampled pages above 3.5%.	The brand name inflates this. Vary wording on Kensington (6.9%), Germantown (6.5%), Fishtown (6.1%), District Heights (6.0%).
Low	Indexing	robots.txt and slug glitches	2 items.	Change Disallow: /*&s= to /*s=. Fix the slug valley-forge-national-park%e2%80%a8 (hidden Unicode line separator).

Speed and Core Web Vitals (lab)

Lighthouse 12.8.2, mobile preset with simulated throttling, run locally on 9 October 2026. Dashed line marks the 'good' threshold of 90.

Page	Perf.	A11y	Best pr.	SEO	LCP	TBT	CLS
Home	33	82	75	100	15.1 s	1,760 ms	0.084
Services	45	85	75	100	4.5 s	1,710 ms	0.019
Baltimore	41	76	75	100	19.3 s	650 ms	0.001
Fees & rates	39	86	75	100	14.4 s	770 ms	0
Blog index	53	83	75	100	3.7 s	1,490 ms	0.1

Homepage on desktop: performance 96, LCP 1.3 s, TBT 0 ms. Server response is 30 to 50 ms thanks to Cloudflare APO, so the slowdown is entirely front-end: the deferred hero background, roughly 530 KB of Google tag scripts, reCAPTCHA (356 KB), Formidable Forms JS (150 KB) and the Facebook pixel. Page weight is 1.6 MB (home) to 2.6 MB (Baltimore).

These are lab numbers from one machine. Check the Core Web Vitals report in Google Search Console for real-user data before and after the fixes.

Crawl health

Check	Result	Status
Sitemap URLs returning 200	2,120 of 2,120	OK
Sitemap URLs that redirect or canonicalise elsewhere	14	Fix
Noindex URLs listed in sitemap (careers)	42	Fix
Broken internal links (404)	4 targets, 11 source pages	Fix
Internal link targets that redirect	62	Fix
Duplicate title groups	10	Fix

Check	Result	Status
Missing meta description	99 (50 categories, 42 careers, 7 other)	Fix
Titles over 60 characters	977	Review
Pages without H1 / with two H1s	5 / 12	Fix
og:image present	2,120 of 2,120	OK
Article + Person schema on posts	1,883 of 1,885	OK
FAQPage schema	288 URLs	OK
Tag archives (1,633) and staging pages	noindex	OK

Crawled all five Yoast sitemaps (1,885 posts, 143 pages, 50 categories, 42 careers) plus 1,710 extra internal link targets.

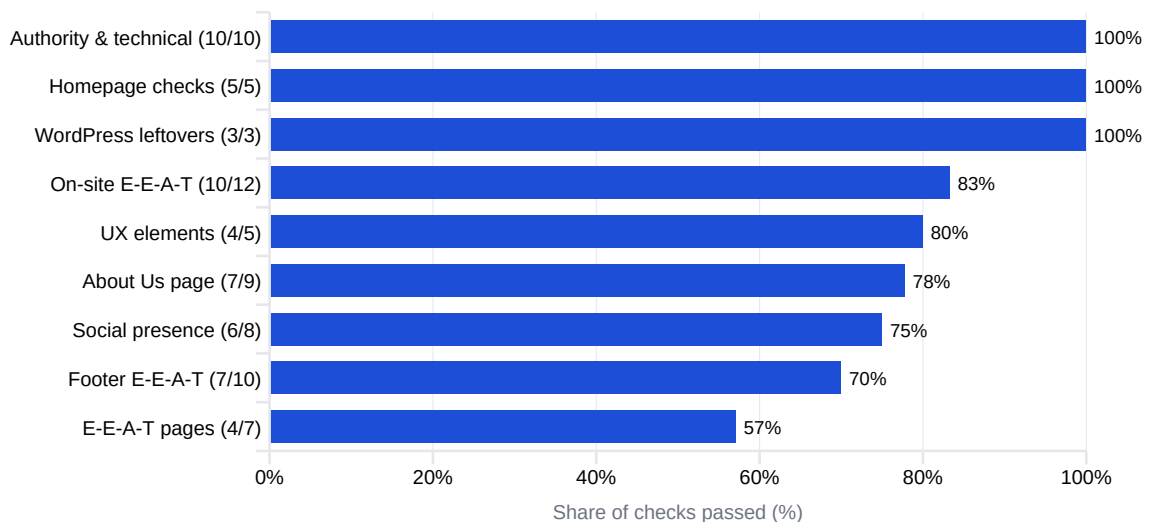

Broken internal links

Broken URL	Status	Pages	Linked from
/washington-dc-staging/	404	6	/philadelphia/ /property-management-companies-washington-dc/ /property-management-company-in-northern-virginia/ ...
/property-management-in-baltimore/mt-vernon/	404	3	/baltimore-property-management-company-ga/ /property-management-in-baltimore/ ...
/blog/what-terms-should-be-included-in-a-lease-agreement/	404	1	/blog/can-landlords-charge-for-cleaning-after-move-out/
/property-management-in-philadelphia/	404	1	/blog/how-to-evict-a-tenant-the-complete-guide-for-landlords/

Duplicate and leftover URLs

URL	Problem
/blog/velkommen-til-bloggen-min/	Theme demo post 'Just another post with A Gallery', indexed
/philadelphia/temple-university-property-management-duplicate/	Duplicate page, indexed
/baltimore-property-management-company-ga/	Ad landing copy of Baltimore page, indexed
/property-management-company-in-northern-virginia-ga/	Ad landing copy of NoVA page, indexed
/blog/budget-home-improvement-ideas/ and /blog/home-improvement-ideas-on-a-budget/	Same title, both indexed
/blog/going-green-reducing-your-rental-property-s-impact/ and /blog/going-green-reducing-your-rental-impact/	Same H1, both indexed
/blog/find-unauthorized-person-rental-property/ and-2/	Sitemap lists the redirecting original
/unsubscribe/	Utility page, indexed

E-E-A-T and trust signals

Source: `wordpress_eeat_audit.py` on the homepage (69 checks). Failed checks: Terms of Service page, team/authors page link, editorial guidelines, footer email, footer site summary, DMCA badge, Pinterest, TikTok, back-to-top button, team photos, featured/partner links, 6 generic 'Read More' links, and all external links set to nofollow.

Content quality

95 Median quality score	37 Median Flesch ease	13 Median grade level	2,097 Median post words
-----------------------------------	---------------------------------	---------------------------------	-----------------------------------

Source: `content_score.py` and `keyword_extract.py` on all 132 live pages plus 40 randomly sampled posts.

Thinnest indexable pages

Page	Main-content words
/locations/maryland/ (no H1)	68
/real-estate-rental-property-resources/dauphin-county/	117
/real-estate-rental-property-resources/chester-county/	119
/real-estate-rental-property-resources/baltimore-city/	127
/real-estate-rental-property-resources/harford-county/	127
/real-estate-rental-property-resources/bucks-county/	129
/real-estate-rental-property-resources/delaware-county/	129
/locations/	131
... 8 more county resource pages	131 to 170

Listing, portal and contact pages are also short but are utility pages, so they are not counted as a content problem.

Tool findings checked and set aside

Tool finding	Why it was excluded
Author byline 'by Step When' on homepage	Not in the HTML. The script misread a 'step by step when' phrase.
'Missing author byline' on service and location pages	Bylines are expected on articles, not service pages.
'Thin content' on posts with 1,000 to 1,450 words	The script's 1,500-word blog minimum is arbitrary. These posts are not thin.

Tool finding	Why it was excluded
Density warnings on 100-word utility pages	Short pages inflate density. Only pages with 300+ words were counted.

Method and scope

1. Full crawl of every URL in the five Yoast sitemaps (2,120) plus 1,710 additional internal link targets, checking status, redirects, title, meta description, H1, canonical, robots, schema, og:image, word count and image alt text.
2. Enterprise SEO Free scripts (business_detect, content_score, keyword_extract, eeat_audit, wordpress_eeat_audit, parse_html) on the homepage and 172 pages. Questionable results were re-checked against the raw HTML.
3. Lighthouse 12.8.2 on five templates (mobile) and the homepage (desktop).

Not covered: backlinks, keyword rankings, Google Business Profiles, Search Console data and real-user CrUX metrics (the PageSpeed Insights API quota was unavailable). Full URL-level issue lists are supplied as CSV files alongside this report.
